NIHARIKA KUMARI

Faridabad, Haryana | 9818440592 | niharikakumari913@gmail.com

PROFESSIONAL SUMMARY

Data professional experienced in designing, building, and maintaining scalable data pipelines and analytics platforms using Python and advanced SQL. Skilled in ETL/ELT workflow development and integrating heterogeneous data sources across NoSQL systems. Hands-on experience with workflow automation, data quality assurance, and cross-functional collaboration with business, analytics, and engineering teams. Eager to apply strong data engineering fundamentals and a proactive, ownership-driven mindset to large-scale, distributed data platforms.

TECHNICAL SKILLS

- Programming & Scripting: Python, SQL
- Data Engineering & ETL: ETL/ELT Pipeline Design, Data Integration, Data Validation, Pandas, NumPy, PyMuPDF, pdfplumber
- Databases: PostgreSQL, MySQL; Query Optimization & Performance Tuning
- NoSQL & Orchestration Exposure: SQL Alchemy ORM, OpenAI Embeddings/API
- Automation & Tools: Task Automation, FastAPI, beautiful Soup, Excel, Power BI (Basics)
- Data Visualization: Matplotlib, Seaborn, Power BI

PROFESSIONAL EXPERIENCE

Data Analyst | Aplus Technology Solutions Pvt. Ltd. *August 2024 – Present*

Gem (Government e-Marketplace) Support & Tender Analysis

- Analysed and validated large volumes of tender data, transforming unstructured information into clean, analysis-ready datasets to ensure accuracy and consistency
- Collaborated with cross-functional stakeholders to gather requirements, track deliverables, and support business decisions with structured reports
- Identified and implemented process improvements to increase data-handling efficiency and reduce manual effort

Project 1: Tender AI Product Matching System (Data Pipeline & Integration)

- Designed and built an end-to-end data pipeline that ingests tender documents (PDF/DOCX), extracts technical specifications via NLP, and matches them against structured product datasets
- Developed modular Python (FastAPI) services for data ingestion, transformation, and orchestration; integrated OpenAI API for embedding-based semantic matching
- Built a dual-matching algorithm combining keyword search and vector embeddings to score and rank data across heterogeneous sources
- Engineered PDF/DOCX parsing pipelines (PyMuPDF, pdfplumber) to convert unstructured documents into structured JSON for downstream processing
- Designed and implemented PostgreSQL schema and data models using SQL Alchemy ORM to store and synchronize tender history and product metadata
- Built a data comparison and reporting layer (HTML/CSS/JS) with downloadable PDF/Excel exports for business reporting

Project 2: Sales Data ETL Pipeline

- Designed and built ETL workflows in Python/Pandas to extract, clean, validate, and transform raw CSV sales data at scale
- Wrote and optimized complex SQL queries to extract and analyze sales data from PostgreSQL
- Loaded transformed data via SQL Alchemy, enforcing data integrity and consistency across the pipeline

Project 3: Aplus Sellout Report Automation

- Built a Flask-based data pipeline tool that automatically converts raw Sales Voucher Excel exports into Aplus Sellout Reports, removing a fully manual reporting process
- Reverse-engineered the transformation logic by systematically comparing sample input/output file pairs, deriving pattern-based filtering and mapping rules instead of relying on hardcoded product lists

- Designed data transformation logic to explode multi-unit sales into per-serial-number records and generate tax calculations as live Excel formulas, while preserving the original template's formatting
- Implemented data validation checks to automatically flag row-level mismatches (e.g., quantity vs. serial number count) for manual review, ensuring no transaction was silently dropped
- Built with Python, Pandas, and openpyxl behind a lightweight Flask backend with a browser-based upload/download workflow

Data Analyst | National Information Centre (NIC) February 2024 – June 2024

Project: IMDB Dataset ETL Optimization

- Built and optimized ETL operations on large datasets to improve data quality, consistency, and pipeline performance
- Cleaned and pre-processed raw data at scale using Python and Pandas
- Integrated multiple heterogeneous datasets into PostgreSQL using SQL Alchemy, supporting downstream analytical reporting

EDUCATION

Bachelor of Technology – Computer Science & Engineering
JC Bose University of Science & Technology (YMCA), Faridabad | 2021 – 2024

Diploma in Computer Science Engineering
BSF Polytechnic, S.T.S. | 2018 – 2021

CERTIFICATIONS

- Python Developer – One Tick Technology
- Microsoft Azure – Honeywell ICT Academy
- Microsoft Office – NSIC
